

I'M Safe for Schools

Safe Schools Scenarios:

- Fire Drills/Evacuation
- Medical Emergency
- Disturbance
- Suspicious Activity
- Lock-Downs

I'm Safe for Schools is a patent pending, cutting edge system that integrates teachers and staff into an emergency response during a school lock-down. It is an unfortunate fact that in most schools once a lock-down has been declared very little (if any) information on the status inside the school is shared with responders risking a slower, less focused response. *I'm Safe for Schools* changes this with the push of a button...teachers and staff can now immediately notify responders exactly what the status is in any classroom!

The software system includes a web enabled dashboard, which compiles the information coming in from teachers and staff and overlays it on a floorplan so responders where they need to be faster. *I'm Safe for Schools* costs a small fraction of hardware based solutions that do less than our system.

Fire Drills and Evacuations: The system is designed to rapidly account for groups under the supervision of a single individual to be able to “check-in” during an emergency evacuation and provide the location and status of a group. By reporting “Out of Classroom” and then the status of the group/class a large number of groups can be easily accounted for.

Disturbances: The “Send Help” function is designed to notify internal administrators, security personnel or others that a problem exist that is not at the level of requesting outside assistance. A text or email will alert the proper individuals who can respond quickly to a concern within a facility.

Suspicious Activity: The “Send Help” function can also be used to bring a concern to the attention for security personnel. Situations such as a person watching a school, an occupied car that is out of place, an intruder or any other indicator of a problem can be reported quickly and without alarming students.

Medical Emergencies: The “Send Help” function can also be used to initiate an internal request in a medical emergency without taking time away from helping an injured or sick student. The single push of a button will get assistance moving to the incident location immediately, allowing the teacher to focus on the person needing help/comfort.

Lock-down and classroom safety reporting and tactical response information:

1. An alert is sent out by a school administrator to teachers and others responsible for a group’s safety such as a classroom. Each user is assigned a unique identifier such as *Classroom 152*.
2. A teacher acknowledges the alert and the *I'm Safe for Schools* app will automatically launch.
3. School administrators and security personnel and tactical response units know immediately what groups of students are safe, where there may be danger and where help is needed.
4. The ability to see the floor plan overlaid with the color coded symbols will speed up response to the affected area and the potential to save lives.

Offsite Button Uses

(Out of Office/Room)

When the Blue "Offsite" button is pressed the phone changes to GPS mode. From that point on any button is pressed the icon will be displayed on the site view.

Uses other than Active Shooter or Lock-Down:

- Send Help
- Fire Drills
- Evacuations
